

5 REASONS to Voice-Enable your UCaaS or Contact Center Solution

BYOC = BRING YOUR OWN CARRIER

CWA = COMMUNICATIONS WORKFLOW AUTOMATION

In comparison to cookie-cutter communications services, a **bring-your-own-carrier (BYOC)** strategy optimized with **communications workflow automation (CWA)** can help tailor your organization's communications strategy so that you can innovate flexibly in the cloud.

While standard communications services are ideal for some organizations, many others benefit most from utilizing BYOC and CWA to voice-enable their UCaaS and contact center solutions.

But how do you know if BYOC and CWA is the right choice for you?

If one or more of the following points applies to your organization, you should consider BYOC and CWA:

1

You require innovative and flexible communication and collaboration services.

Managing your voice, UCaaS or contact center platforms independently using BYOC and CWA delivers the flexibility needed to control your communications while still maintaining a seamless end-user experience.

2

You need to future-proof your communications.

Supporting your communications strategy with BYOC and CWA means that you can leverage artificial intelligence and workflow automation to operate effortlessly across multiple channels, no matter how your customers want to be communicated with and what happens in the future.

3

You require a cost-effective solution.

When you optimize your UCaaS or contact center solution with BYOC you can dodge hidden costs typically found in bundles, as well as maintain your existing voice contracts to avoid early termination fees. CWA also delivers ongoing cost savings by streamlining communications with AI to reduce agent activity.

4

Your business relies on consistent, high-quality, economical communications across platforms.

Getting your voice services from your UCaaS or contact center provider doesn't allow you to support other platforms that are critical to your success. BYOC allows you to select a carrier and CWA platform that delivers seamless quality across all platforms and service locations.

5

You require white-glove service and 99.999% reliability.

Your communications strategy will evolve as the world and your organization changes. BYOC allows you to choose a carrier and CWA platform that guarantees 99.999% reliability, delivers enterprise-quality 24/7/365 support, and offers advanced voice capabilities like applications to support omnichannel communications.

How are IntelPeer customers using

BYOC

to excel?

Direct SIP trunking

Routes traffic directly to the provider. Dynamic failover routing is used to alternative destinations to support disaster recovery. Now, your communications can stay up and running no matter what occurs.

Hybrid model

Routes traffic to the hosted providers as well as routes separate SIP connections to the enterprise premise, so that you can take advantage of both cloud and on-premise solutions.

Adding on CWA

Layers communications applications in front of the SIP termination and the hosted provider to automate workflows, processes, and operations, so that you can deliver best-in-class service and communications.

AMPLIFY

your communications with no-code and low-code communications workflow automation.

Not all BYOC and CWA Platforms are equal.

See how IntelPeer's communications applications integrate with and add value to your UCaaS or contact center solutions.

Advanced voice capabilities

Enjoy guaranteed 99.999% reliability and consistent service with IntelPeer's owned and operated triple-redundant network.

24/7/365 white-glove service

Benefit from dedicated reps and enterprise-quality service and support delivered from live agents located in the U.S.

Powerful no-code applications

Complement your UCaaS or contact center solution with intermediate deployable applications including IVR, auto response, routing, and more.

Low-code customization

Easily customize business and communications processes for complex integrations, built-in analytics, and AI.

Did one or more of the reasons to add BYOC and CWA to your UCaaS or contact center solution apply to you?
